Dark Themes Mozilla Firefox Black Input Box Fix

Original Website with Information... http://ubuntuforums.org/showthread.php?t=1715031

The file titled "userContent.css" is located in the same directory you have accessed this file. Please copy this file to your Desktop

Instructions

1. Run Terminal (press and hold Ctrl + Alt + T)

2. In Terminal type (remember this name as we will now use sarah as the example)
    whoami

3. Switch to super user by typing
    sudo su -

4. Type your password into terminal and then press the enter / return key... You are now ROOT User or Super User!

5. Go to your Home Folder

6. Press Ctrl + H to view hidden files or files with a .FolderName

7. Navigate to the following directories
    Home => .mozilla => firefox

8. Locate the directory titled "xxxxxxxx.default" as this is the folder we need to remember

9. Select the directory so it is highlighted as we will now assume this folder is named "ezcnownl.default" as my folder is

10. Press the F2 key and then press the Ctrl + C to Copy the Folder Name

11. Run the following Commands in Terminal
    *** Remember to substitute "ezcnownl.default" with your folder name so if you had "atrdthed.default" you would use "atrdthed.default" and not "ezcnownl.default".
    *** Remember you will also need to use your who whoami result to substitute "sarah"
    cd /home/sarah/.mozilla/firefox/ezcnownl.default/
    mkdir chrome
    sudo chown -R sarah: sarah /home/sarah/.mozilla/firefox/ezcnownl.default/chrome

12. Now you need to Exit Root User in Terminal so type
    exit

13. Now you need to Exit Terminal so type
    exit

14. Now you need to cut your "userContent.css" from the desktop into the directory "/home/sarah/.mozilla/firefox/ezcnownl.default/" so use your mouse and right click on the file "userContent.css" on the desktop and select "Cut"

15. Go to your Home Folder

16. Press Ctrl + H to view hidden files or files with a .FolderName

17. Navigate to the following directories
    Home => .mozilla => firefox => ezcnownl.default => chrome

18. Right mouse click in the directory and select paste

19. Run Firefox as normal and the Black Input Boxes with Black Text Override will be amended with a Grey input Box with Black Text

* You have now amended Mozilla Firefox for use with darker themes such as my Sway Themes for Ubuntu 12.04 but I hope this change works with all dark themes.

* Sincere Thanks to the author Bagy of the website http://ubuntuforums.org/showthread.php?t=1715031 who provided the information for this fix / amendment.
